One of the problems with Photoshop is familiarity. There's a sense of excitement that this latest version is so dramatically improved, but the real-real test is if users like simple tasks more than complex ones. That's clearly what the new Adobe Camera Raw shows as a number of basic photo editing tasks are streamlined, resulting in fewer steps while the quality is better. There's also a number of changes in the newer versions that make this more like the Adobe products you already know, like the ability to easily talk past the photographer. The biggest thing is that you can now make edits to your image in real time, which is much easier than it used to be and is one of the things we're most excited about as a new Photoshop user. If you've sold your best feature images to a client, you should learn how to manage your own data as well. This is likely to become a #1 requested area of improvement in the years to come for Photoshop. If you're searching for a compelling solution for reducing the number of actually used images, it's worth to give the number of images shot from a camera seriously increased. So do the numbers. This would allow us to include neatly cropped and 3d-prepared images into the set too. The tools shown below are oriented for picture management in the desktop and browser client area only. For the ultimate functionality of output, especially for increasing output volume, you can always use ProRes FileMaker instead of the ones provided by Audition or FCP X. Lightroom 5 has a new UI logical step, more stable handling of images, and an improved ability to work. You may have a superb photo pack and a great set of actions, but this Apple IDE has a new and surprising performance. Do the numbers, and you will receive an exciting result.
