“By incorporating extremely powerful new AI capabilities into its world-class desktop application, Adobe has made it possible to create and collaborate on images in a truly intuitive, highly customisable and dynamic manner,” said Angeline Harris, Head of Engineering at Adobe. “As a result of this integration, Photoshop is the only software that lets you make updates in the browser to preview and manipulate designs while maintaining great user experience on desktops at the same time.” The new and ground-breaking capabilities that make Share for Review possible - features such as Content Link, Digital Path, Path, Smart Objects and animation - power the inherent collaboration and co-authoring of edits and builds on top of the fundamental user experience that makes Photoshop so powerful and groundbreaking. Share for Review can launch from a team project, bringing together the latest in collaborative team work and feature-rich workflows in a single efficient workflow that fits the needs of all team members, whether they're on a desktop or mobile device. The new CSS-driven web experience in Photoshop enables designers to edit and touch up images on desktops in a browser, making it easy for team members to collaborate from anywhere. Using the new collaborative editing features, designers can now easily design prototypes of interface elements on a browser in team projects, without having to approve the final design. CSS-driven web design in Photoshop is enabled by the InDesign or web-based application, which automatically converts PSD files into CSS files.

It may be quicker than using the selection tool, but it is still time consuming. If you need to make sure that content stays in a particular place, like a subject head, food or flower, then the Content-Aware Move tool can help you fix it. This tool allows you to drag the content that you wish to stay in place, and the tool will use the most similar content to fill in the empty space. Adobe Photoshop for PC now offers a streamlined interface that is more like the popular UI standards seen on mobile. All of the elements found in Photoshop are now in the top bar along with the new top Controls bar, and the Menu bar, making for a consistent flow between the most used tools and the most frequently used features. The simple interface enables the user to instantly access all the common tools via a single tap. Photoshop's 3D features will be removed in future updates. Users working with 3D are encouraged to explore Adobe's new Substance 3D collection, which represents the next generation of 3D tools from Adobe. Additional details on the discontinuation of Photoshop's 3D features can be found here: **Photoshop 3D Common questions on discontinued 3D features**. With this transition to newer native APIs, together with the recent reboot of 3D tooling at Adobe featuring the Substance line of 3D products, the time has come to retire Photoshop's legacy 3D feature set, and look to the future of how Photoshop and the Substance products will work together to bring the best of modern 2D and 3D to life across Adobe's products on the more stable native GPU APIs.
